

## Review of the Nordic Dermatology Congresses 1986-2008

Nordic Dermatology Association was founded in 1910 with the aim to promote the scientific exchange between dermatologists and venereologists in the Nordic countries through meetings to be held every third year.

In the Yearbook of Nordic Medical History of 1985, G Asboe-Hansen, J Gudgeirsson, S Lidén, K Mustakallio, G Rajka and H Porarisson wrote a chapter about the association to celebrate its 75<sup>th</sup> anniversary. You will find the article above. To celebrate the 100<sup>th</sup> anniversary we wanted to invite participants of the Nordic congresses over the last 25 years to share their memories from the congresses and to tell about their carriers.

I reviewed the congress books from the 24<sup>th</sup>- 31<sup>st</sup> Nordic congresses in order to extract the names of Nordic dermatologists to interview. Together with Agneta Andersson, the editor of Forum for Nordic Dermatology, we sent interview questions to about 300 Nordic dermatologists by e-mail. Twentytwo dermatologists responded and wrote most exciting memories, collected in a little booklet “100<sup>th</sup> Anniversary of the Nordic Dermatology Association” which was released at the 32<sup>nd</sup> Nordic Congress in Tampere in 2013, some copies being sent to the authors and to dermatology departments of the university hospitals of the Nordic countries. The booklet is to be found above. The interviews were also published in Forum of Nordic Dermatology (vol 18) together with the abstracts of the 32<sup>nd</sup> Nordic Congress in Tampere in August 2013.

Below you will find the background material with the names of the speakers, the *sessions* (symposium, course or workshop) and the titles of their presentations at the mentioned congresses. The point to publish this material is to throw light on Nordic dermatologists participating in the congresses and to show their fields of interest: research, treatment traditions and how it changed over the time. As the primary purpose of this review was to extract as many names of the participants as possible - not all presentations of the most active speakers are stated, just catching the fields of their expertise. The number of presentations was huge, far from all being included. The titles have been selected to show the diversity of studies as well as trends. I chose to summarize the congresses in a backward order from the 31<sup>st</sup> of 2008 to the 24<sup>th</sup> congress of 1986 to make it less historic and more up to date.
